Applicant	_						
MTU AERO ENGINES GMB							
	1. This report is the international preliminary examination report, established by this International Preliminary Examining Authority under Article 35 and transmitted to the applicant according to Article 36.						
2. This REPORT consists of a total of	4 sheets, i	ncluding this cover sheet.					
3. This report is also accompanied by A	NNEXES, comprising:						
a. (sent to the applicant and	to the International Bureau) a total of _	sheets, as follows:					
		e been amended and are the basis for this report and/or					
sheets containing re Instructions).	ctifications authorized by this Authority	(see Rule 70.16 and Section 607 of the Administrative					
	ede earlier sheets, but which this Author	rity considers contain an amendment that goes beyond					
the disclosure in the Box.	e international application as filed, as in	dicated in item 4 of Box No. I and the Supplemental					
b. (sent to the International	Bureau only) a total of (indicate type and	number of electronic carrier(s))					
(see to the the themsone)	Dureau oray) a total of (maleure type and						
related thereto, in computer	readable form only, as indicated in the	, containing a sequence listing and/or tables Supplemental Box Relating to Sequence Listing (see					
Section 802 of the Administration	•						
4. This report contains indications relati	ng to the following items:						
Box No. I Basis of the	report						
Box No. II Priority							
Box No. III Non-establi	shment of opinion with regard to novelty	, inventive step and industrial applicability					
Box No. IV Lack of uni	ty of invention						
		to novelty, inventive step or industrial applicability;					
	citations and explanations supporting such statement						
Box No. VI Certain doc	uments cited						
Box No. VII Certain defe	ects in the international application						
Box No. VIII Certain obs	ervations on the international application						
Date of submission of the demand	Date of completi	on of this report					
Name and mailing address of the IPEA/EP	Authorized office	er					
Facsimile No.	Telephone No.						

INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No.
PCT/DE2004/002368

Вох	No. I		Basis of the report				
1.			I to the language , this report is based on the internation der this item.	nal application in the language in	which it was filed, unless otherwise		
			eport is based on translations from the original langua is the language of a translation furnished for the purp		,		
			international search (Rule 12.3 and 23.1(b))				
		Ш	publication of the international application (Rule 12.4)			
		Ш	international preliminary examination (Rule 55.2 and	for 55.3)			
2.	rece	h regard to the elements of the international application, this report is based on (replacement sheets which have been furnished to the riving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are not annexed to report):					
		the in	ternational application as originally filed/furnished				
	\boxtimes	the de	escription:				
		pages	1-6		as originally filed/furnished		
		pages	*	received by this Authority on			
		pages	*	received by this Authority on			
	\boxtimes	the cla	aims:				
		nos.			as originally filed/furnished		
		nos.*		as amended (togethe	r with any statement) under Article 19		
		nos.*		received by this Authority on	06.08.2005 with letter		
		nos.*		received by this Authority on			
		the dr	awings:				
		sheets			as originally filed/furnished		
		sheets					
		sheets					
	П		nence listing and/or any related table(s) – see Supplem				
	\exists	_		ental Box Relating to sequence L	isung.		
3.	Ш		mendments have resulted in the cancellation of:				
			the description, pages				
			the claims, nos.				
			the drawings, sheets/figs				
		\vdash	the sequence listing (specify):				
					_		
4.		they h	report has been established as if (some of) the amendave been considered to go beyond the disclosure as fi	led, as indicated in the Supplemen	tal Box (Rule 70.2(c)).		
		\vdash	the description, pages				
		\vdash	the claims, nos.				
			the drawings, sheets/figs				
			the sequence listing (specify):				
			any table(s) related to sequence listing (specify):				
*	If ite	em 4 apj	plies, some or all of those sheets may be marked "sup	erseded."			

International application No.		
PCT/DE2004/002368		

Вох	No. V			rticle 35(2) with regard to novelty, inventive step or industrial applicability; oporting such statement	
1.	Statement				
	Novelty (N)	Claims	1-5	YES
			Claims		NO
	Inventive	step (IS)	Claims	_1-5	YES
			Claims		NO
	Industrial	l applicability (IA)	Claims	1-5	YES
			Claims		NO

- 2. Citations and explanations (Rule 70.7)
 - 1. Reference is made to the following documents:
 - D1: EP 0 937 532 A (M J TECHNOLOGIES LIMITED),
 - 25 August 1999 (1999-08-25)
 - D2: WO 86/02301 (ADVANCED LASER SYSTEMS, INC),
 - 24 April 1986 (1986-04-24)
 - 2. Document D1, which is considered to be the prior art closest to the subject matter of claim 1, discloses the following (the references in parentheses are to D1):

A method for checking a drill hole made in a workpiece (4) by laser pulses, wherein characteristic signals are received from the hole by a sensor (1) and are compared with setpoint values (column 3, lines 34 to 35), and only those signals received in a characteristic time interval after a laser pulse are considered.

The subject matter of claim 1 differs from the known method in that the characteristic time interval is defined according to the material properties of the workpiece and process parameters of the laser pulse,

International application No. PCT/DE2004/002368

Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

> such that the time interval does not begin until at least a thin skin of the wall of the drill hole has re-solidified after being melted by a laser pulse, and such the time interval ends as soon as this is followed by a new laser pulse.

The problem addressed by the present invention can thus be seen as that of how to make the monitoring process more precise.

The solution proposed in claim 1 of the application involves an inventive step (PCT Article 33(3)) because the aforementioned distinguishing features are not found in the prior art. There is also nothing in the prior art to suggest analysing signals from the drill hole during the course of production; that is, practically pulse by pulse.

3. Dependent claims 2 to 6 do not contain any features that meet the PCT requirements in respect of novelty or inventive step when combined with the features of any of the back-referenced claims.
